MAIL / DMS**

South Carolina PSC, I am Travis K. Lang the hidden whistleblower of VC Summer. NRC RII-2016-A-0201, RII-2016-A-0038, federal osha 4-0520-17040, nrc OGI C18 002. I was subject to brutal retaliation and hostile counter measures of actions for many years. I wished to stay out of the spotlight given the nature of actions and what I endured. I have endured threats, harassment, attacks against character, endured change of positions to protect fraud and wrong doing. Refused bribes connected to violations fraud of products, materials, violation of codes and breaking laws. They attack my pay not

allowing advancement and etc. They tried to have me break the law and violate the rules. These people are unmerciful and do everything to protect the money of actions and crimes committed and violated.

Subject: Info

My name is Travis K. Lang hidden nuclear whistleblower at vc summers ap 1000. Contained within my case of information is bi-level issues that will impact to you. I estimate somewhere between 15 to 20 billion.

First let's go back to 2011 to 2012 of focus area of fraud and deception to people and interest. Southern company came to psc for hike on issue of modification of design required by new laws of Fukushima of natural disaster requirement just like Scana did for VC summers. Nrc received information of whistleblower of Westinghouse was using non-approved software give false structural integrity calculations. Westinghouse whistleblower only step forward because Westinghouse was trying to hide information of willful and intentional violations of hiding. After NRC receive information knowing that Westinghouse violated many laws. Natural missile and aircraft impact laws were violated and pre date new requirements that were made to pad the violations and breaking laws. Please keep in mind this is only one example. PSC you have a technical oversight committee to receive this information and see they still violate old and new rules.

Attached/ links of pictures and rules of next violations piggybacking on violations. As your oversight committee pulls the analyst report. They will notice that containment materials are not there for structural integrity. They will see that in the report for complete containment assessment some one is lying again and that the materials are not even present nor in existence in the pictures as you look through the hole in contaminated building. Your technical team will be able to identify a willful and intentional violation. The Ap 1000 is not safe nor does it meet requirements. I estimate additional cost to be in the area of 2 to 6 billion dollars and sorry about the robust estimate of impact. This is due to, I would have to further assess progress, rework of progress, and impacts of all applicable information that is not public.

I understand PSC of the pressures you face. Many officials and government agencies push for perfect road map of prototype and are violating own rules including checks and balances while applying pressure of build.

Replying to [@henrymcmaster](#)

At least we pull out before the scam got too bad. 9 billion bid on two reactors and estimated made on a design not complete and prototype. Look how hard DOE and NRC push. Poor Vogtle and safety to the people. Number 2. Is a built in skylight.
